

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

sub
D1

1. (Currently Amended) A CCM calculating system for calculating a blending ratio of colorants based on stored color data, said system comprising:

a data receiving means for receiving input data of differences between color specification values corresponding to a color chip and color specification values corresponding to a desired target color; and

a calculating means for calculating a blending ratio of colorants for reproducing said target color based on said stored color input data and said data of differences of said color specification values of ~~color specification values and said stored color data.~~

2. (Original) The CCM calculating system as claimed in claim 1 comprising a server storing said color data, wherein said calculating means calculates said blending ratio using said server.

B2

3. (Original) The CCM calculating system as claimed in claim 1, further comprising a color specification value displaying means for displaying color specification values included in said input data of color specification values.

4. (Original) The CCM calculating system as claimed in claim 1, further comprising a correcting means for correcting said color specification values displayed on said displaying means.

Claim 5 (canceled).

6. (Original) The CCM calculating system as claimed in claim 1, further comprising blending ratio displaying means for displaying said calculated blending ratio of colorants.

7. (Original) The CCM calculating system as claimed in claim 6, wherein said

color data includes data of costs of colorants, said calculating means provides a plurality of said blending ratios of colorants and calculates the total cost of each of said calculated blending ratios based on said data of costs of colorants, and said blending ratio displaying means displays said plurality of blending ratios arranged in the descending order or the ascending order in terms of said total cost.

8. (Original) The CCM calculating system as claimed in claim 1, wherein first difference of hues, lightness or chromas of said target color and a test sample for toning with one light irradiated is different from second difference of hues, lightness or chromas of said target color and said test sample with another light irradiated, and wherein said system further comprises means for calculating said blending ratio of colorants which may effectively decrease the difference between said first difference and said second difference.

9. (Original) The CCM calculating system as claimed in claim 1, wherein said color data is provided based on data obtained by the measurement by means of a spectrophotometer.

10. (Original) The CCM calculating system as claimed in claim 1, wherein said color data is provided based on data obtained by the measurement by means of a colorimeter.

11. (Currently Amended) A CCM calculating method for calculating a blending ratio of colorants based on stored color data, said method comprising the steps of:

receiving data of differences between color specification values corresponding to a color chip and color specification values corresponding to a desired target color; and

calculating a blending ratio of colorants for reproducing said target color based on said stored color received data and said data of differences of said color specification values ~~and said stored color data~~.

12. (Currently Amended) A computer-readable medium having a program of instructions for execution by the computer to perform a CCM calculation processing for providing a blending ratio of colorants based on stored color data, said CCM calculation processing comprising the steps of:

receiving data of differences between color specification values corresponding to a color chip and color specification values corresponding to a desired target color; and

calculating a blending ratio of colorants for reproducing said target color based on said ~~received~~ stored color data and said data of differences of said color specification values and ~~said stored color data~~.

13. (New) The method of claim 11, wherein said blending ratio is calculated using a server storing said color data.

14. (New) The method of claim 11, further comprising the step of displaying said input data using an input data displaying means.

15. (New) The method of claim 11, further comprising the step of correcting said color specification values displayed on said input data displaying means.

16. (New) The method of claim 11, wherein said color data includes data of colorants, resins or applications.

17. (New) The method of claim 11, further comprising the step of displaying said calculated blending ratio of colorants in a blending ratio displaying means.

18. (New) The method of claim 17, wherein said color data includes data of costs of colorants, a plurality of said blending ratios of colorants are provided and the total cost of each of said calculated blending ratios is calculated based on said data of costs of colorants, and said blending ratio displaying means displays said plurality of blending ratios arranged in the descending order or the ascending order in terms of said total cost.

19. (New) The method of claim 18, wherein first difference of hues, lightness or chroma of said target color and a test sample for toning with one light irradiated is different from second difference of hues, lightness or chroma of said target color and said test sample with another light irradiated, and wherein said blending ratio of colorants is calculated which may

effectively decrease the difference between said first difference and said second difference.

20. (New) The method of claims 19, wherein said color data is provided based on data obtained by the measurement by means of a spectrophotometer.

21. (New) The method of claim 20, wherein said color data is provided based on data obtained by the measurement by means of a colorimeter.
